Petition to Have Eternity eau de parfum Misbranded

Dear Sir or Madam:

On May 19, 1999, the Environmental Health Network (EHN) submitted the above petition to have Calvin Klein Eternity eau de parfum misbranded and/or adulterated. I am writing because I fully support this petition and would like to draw your careful attention with regard to your regulations 21CFR Sec. 740.1, 21CFR Sec. 740.2, and 21CFR Sec. 740.10. Regulation 21CFR Sec. 740.10 specifically states:

"Each cosmetic or cosmetic product and each finished cosmetic product shall be adequately substantiated for safety prior to marketing. No cosmetic or product whose safety is not adequately substantiated shall be put into commerce unless it contains the following conspicuous statement on the principal display panel: 'Warning: The safety of this product has not been determined.'"

The ad here shows Eternity contains toxic ingredients and ingredients whose safety have not been substantiated. There is no warning label on its packaging.

We all have a right to know the status of safety testing of the ingredients in products such as Eternity so that we can protect ourselves and our families from toxic chemicals that may cause health problems. Most people are not aware that most fragrance materials have only limited safety testing. They wrongfully assume these products are safe to use in any setting and are surprised when people complain.

Like tobacco smoke, the harmful chemicals currently used in these products may effect the health of many people, including people with asthma, chemical sensitivities, chronic fatigue, and other environmental illnesses. Children are particularly vulnerable to toxic chemicals found in products and have been used by their parents, caregivers, and teachers.

It is the behavior of the millions of people who have suffered physical illness and injury resulting from exposure to these chemicals at work, at school and in social settings. These toxic chemicals act as powerful irritants in people afflicted by asthma and chemical sensitivities. Because of this, toxic chemicals in these products are a health hazard.

Thank you

E. Renee Kole

Petition to Have Eternity eau de parfum Misbranded

Dear Sir or Madam:

In May 1999, the Environmental Health Network (EHN) submitted the above petition to have Calvin Klein's Eternity eau de parfum declared misbranded. I am writing because I fully support this petition and request that the FDA give it careful attention with regard to your regulations 21CFR Sec. 740.1, 21CFR Sec. 740.2, and 21CFR Sec. 740.10. Regulation 21CFR Sec. 740.10 specifically states:

Each ingredient used in a cosmetic product and each finished cosmetic product shall be adequately substantiated for safety prior to marketing. Any such ingredient or product whose safety is not adequately substantiated prior to marketing is misbranded unless it contains the following conspicuous statement on the principal display panel: "Warning--The safety of this product has not been determined."

As the petition shows, Eternity contains toxic ingredients and ingredients whose safety have not been substantiated. There is no warning label on its packaging.

We all have a right to know the status of safety testing of the ingredients in products such as Eternity so that we can protect ourselves and our families from toxic chemicals that may cause health problems. Most people are not aware that most fragrance materials have only limited safety testing. They wrongfully assume these products are safe to use in any setting and are surprised when people complain.

Like tobacco smoke, the harmful chemicals currently used in these products may effect the health of many people, including people with asthma, chemical sensitivities, chronic fatigue, and other environmental illnesses. Children are particularly vulnerable to toxic chemicals found in products purchased and used by their parents, care givers and teachers.

Please act on behalf of the millions of people who have suffered physical illness and injury resulting from fragrances: at work, at school and in social settings. These toxic chemicals act as powerful barriers to people disabled by asthma and chemical sensitivities. Because of this, toxic chemicals in fragrances have already ruined countless lives.

Thank you.

Sincerely,

E. Renee Kole
